PROFESSIONAL SUMMARY

Full Stack Developer and QA Engineer (University Technician in Programming, UTN) with experience building, testing and maintaining production web applications with React, TypeScript, Node.js, PostgreSQL and Supabase. I work the full cycle: data modeling, REST APIs, responsive interfaces, functional and regression testing, and CI/CD deployment. My dual profile lets me not only build the feature, but reproduce the bug, read the code, isolate the root cause and verify the fix in production. I currently develop and ensure the quality of a 100+ screen SaaS platform (React 18 + TypeScript + Supabase) with CI/CD-governed releases, in a remote team under Scrum/Kanban. I apply AI tools (Claude Code, agents, MCP) as an accelerator for analysis and review, without delegating technical judgment or architecture.

TECH STACK

Frontend: React 18, TypeScript, JavaScript (ES6+), Next.js, Vite, Tailwind CSS, shadcn/ui, React Router, React Hook Form, Zod, TanStack Query, HTML5, CSS3, responsive design and state management.

Backend: Node.js, Express.js, REST APIs, role-based authentication and authorization (RBAC), JWT, data validation, error handling and integration of third-party services and webhooks.

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, Supabase (Postgres, Auth, Storage, Row Level Security), relational modeling, migrations and query optimization.

Testing & QA: Manual and functional testing, regression, exploratory, smoke/sanity, E2E, UAT, cross-browser and responsive; test cases and plans, defect reporting and bug life cycle; Vitest, Playwright, React Testing Library, Postman.

DevOps & tools: Git, GitHub, GitHub Actions (CI/CD), Pull Requests, conventional commits, Cloudflare Pages, Vercel, Chrome DevTools, Jira, Trello, Figma, Power BI.

Applied AI: Claude Code, ChatGPT, OpenCode, KiloCode, Model Context Protocol (MCP) and coding agents for AI-assisted development, code review, documentation and automation.

PROFESSIONAL EXPERIENCE

Full Stack Developer & QA Engineer / AI Platform Engineer

BuildShare Development Capital Inc. — BuilderK | Remote | 2026 – Present

SaaS platform for operations, CRM and quoting in the construction sector. React 18 + TypeScript + Vite + Tailwind + Supabase (PostgreSQL), deployed on Cloudflare Pages with CI/CD on GitHub Actions.

- Built the fixed-price line-items module of the quoting tool and the dual budget output (client version with the total / internal version with the cost breakdown) on a single render component.
- Implemented PDF blueprint upload by rasterizing the first page to PNG with pdfjs-dist in a lazy-loaded chunk, fixing render blocking on background tabs.
- Built the client search over the local mirror of an external CRM (GoHighLevel) with debounced search, and the per-client scope-of-work editor (nine sections with their own snapshot and automatic renumbering).
- Replaced a systemic pattern of 573 silenced errors with explicit failure handling: 71 screens where a read error rendered as an empty list went to 0 across the operational core (Investor CRM, from 26 to 0).
- Functional and regression QA of the quoting module: detected, documented, fixed and verified in production 4 client-facing defects, including a silent data loss on save (stale closure bug).
- Platform data-quality audit: corrected 106 of 286 monetary values with wrong format/locale, a cross-cutting defect reaching signed contracts and documents sent by email.
- Stabilized permanently-red test suites (CRLF/LF and timeouts) restoring a reliable build signal (635/635) and wrote the missing GitHub Actions workflow to run database migrations.
- Delivered 11 of 12 items of a changelist across 5 production releases, coordinating merges with another team on the same branch and verifying the deployed bundle against the approved SHA.

Full Stack Developer & Functional QA — Freelance

Projects for healthcare, management and digital products | 2023 – Present

- End-to-end web app development: requirements, data modeling, REST APIs with Node.js/Express with authentication and roles, React UI and production deployment.

- Functional QA of CRUDs, validated forms and role-based behavior; API validation with Postman and data integrity with SQL (MySQL/PostgreSQL); retesting and regression after each fix.

SELECTED PROJECTS

Harmonia — Medical records management React · Node.js · Express · PostgreSQL · Tailwind

- Patient, appointment, consultation and clinical-history modules; REST APIs for the full CRUD cycle with role-based permissions on frontend and backend.

Hospital San Pablo — Hospital management React · JavaScript · Node.js · MySQL

- Admissions and appointment module in real front-desk use, with an interface adapted to desks and tablets.

Nefrogen — Nephrology clinic platform React · Node.js · MySQL · Tailwind

- Patient, clinical-evolution, treatment and reporting modules over complex medical data, with components for high data density.

NovaRetail — E-commerce business analytics SQL · MySQL · Power BI

- Data modeling, SQL queries for key metrics and Power BI dashboards with trend and anomaly detection.

EDUCATION

University Technician in Programming — Universidad Tecnológica Nacional (UTN), Argentina.

Additional: UX/UI Design and Front-End Web Development (CoderHouse), Front-End Web Development (Argentina Programa), Web Design (Open Education). Continuous learning in QA/testing, web development, applied AI and data analysis.

LANGUAGES & SKILLS

Languages: Native Spanish. Intermediate technical English: reading documentation, tickets and specifications, and written communication with international teams.

Skills: problem solving, analytical thinking, attention to detail, communication with technical and product teams, autonomy, organization and continuous learning.
